PROFESSIONAL SUMMARY

Technical Team Lead with 13+ years in backend engineering and 8+ years leading teams. Currently lead engineering for FlexWhere and EdControls, Dutchview's two SaaS platforms — 30+ microservices built on Java/Spring Boot, Elasticsearch and Kubernetes. Track record of measurable outcomes: 27% AWS cost reduction, a monolith-to-microservices migration, and an on-premise-to-SaaS transition. Hands-on architect who still ships code, with full ownership of hiring, mentoring and delivery.

CORE SKILLS

Languages: Java, Groovy, TypeScript, JavaScript, SQL

Backend: Spring Boot, Spring MVC, Microservices, REST APIs, Hibernate, Node.js

Cloud & Infrastructure: AWS (EC2, S3, Glacier), Kubernetes, Docker, GitOps (ArgoCD), Jenkins, GitHub Actions

Data, Search & Messaging: Elasticsearch, PostgreSQL, MongoDB, MySQL, Oracle, RabbitMQ

AI & LLM: LLM integration, MCP (Model Context Protocol) servers, prompt engineering, AI-assisted development (Claude, agentic coding tools)

Security & Identity: OAuth2, JWT, SSO, SCIM, LDAP

Leadership: Team leadership, hiring & mentoring, Agile/Scrum, architecture review, stakeholder management

PROFESSIONAL EXPERIENCE

Technical Team Lead

Nov 2018 – Present

Dutchview IT — Deventer, Netherlands

- Engineering lead for FlexWhere (workplace management) and EdControls (construction quality control) — Dutchview's two SaaS platforms, used by organizations across Europe.
- Led the migration from a monolithic architecture to 30+ microservices on Java/Spring Boot, Elasticsearch and Kubernetes, improving scalability and deployment independence.
- Reduced AWS infrastructure costs by ~27% through EC2/S3 optimization and cloud architecture review.
- Drove the transition of on-premise deployments to a SaaS delivery model; co-designed a new storage licensing model that added a measurable recurring revenue stream.
- Architected OAuth2 authorization servers, SSO/SCIM provisioning, a multi-tenant Google Calendar integration, and billing and invoicing systems with subscription lifecycle management.
- Built Kubernetes infrastructure with GitOps (ArgoCD), automated SSL and multi-cloud deployments; modernized legacy components without interrupting delivery.
- Hands-on with applied AI: built MCP (Model Context Protocol) servers and LLM integrations, and embedded AI-assisted development workflows (Claude, agentic coding tools) into the team's engineering practice.
- Own hiring, onboarding, mentoring and performance reviews for the engineering team.

Senior Software Engineer → Tech Lead

Apr 2016 – Oct 2018

Mobinius Technologies — Bengaluru, India

- Progressed from senior engineer to tech lead, leading a team of ~12 engineers at a 60–80 person digital engineering company — first team leadership role.
- Combined hands-on backend development (Java, Spring) with technical leadership: planning, code review and mentoring.

Software Developer

Jan 2015 – Apr 2016

July Systems — Bengaluru, India

- Backend developer on Proximity MX, a cloud SaaS platform for location analytics — delivered end-to-end client projects for AMEX, Mall of America, the Norwegian Football League and Dick's Sporting Goods.
- Functioned as ScrumMaster; owned client communication, requirements and delivery. (Java, Groovy, Spring MVC, RESTful services)

Software Engineer

Jul 2012 – Jan 2015

Bluechip Solutions — Bengaluru, India

- Core engineer on the cloud migration of Profitplus Enterprise ERP (Sales, Finance, Inventory, HRMS, CRM): designed REST services, built the ExtJS front end, and delivered implementations for three enterprise clients.

EDUCATION

B.E. Information Technology

2007 – 2011

Vivekananda Institute of Technology
